

Second-Model Audit Brief

Use a different AI to challenge the work. Keep the final decision human.

A polished answer can still be wrong. This ten-minute check helps you find the risks that matter before someone else receives the work.

1. GIVE THE REVIEWER THE RIGHT CONTEXT

1. Original ask

Paste exactly what you asked the first AI to produce.

2. Finished result

Paste the exact version a person will receive - not a summary.

3. Rules

List the audience, facts, tone, format, permissions, and non-negotiables.

2. COPY AND PASTE THIS PROMPT

Act as an independent reviewer. Another AI created the work below. Do not assume it is correct because it sounds polished. Tell me what is unclear, inaccurate, unsupported, missing, repetitive, or out of step with my instructions. List the three most important problems first. For each one, quote the exact passage, explain the problem in plain language, and suggest a specific fix. Tell me what is working and should stay. If you cannot verify something, say so instead of guessing.

3. CHECK THE REVIEW BEFORE YOU TRUST IT

Evidence

Can it quote the exact problem and support the claim?

Context

Does the finding matter for the person receiving the work?

Decision

What will you keep, change, reject, or mark unknown?

4. MAKE THE DECISION YOURS

Keep	What is already working and should stay?
Change	What will you revise before the work leaves your hands?
Verify	What still needs a source, a person, or an honest "unknown"?

The second model is a reviewer - not the final authority.
